Golf Glove Care

Always take care in putting on and taking off your glove.

Carefully mould the glove around your fingers working it half way down the hand, then moulding onto the thumb working it back to your wrist.

Never pull on the glove for fear of tearing it.

If wet or damp, reshape and dry the glove as soon as possible at room temperature and never in sunlight.

Use the packing sleeve for protection while not in use.

Never store the glove when it is wet or damp.
